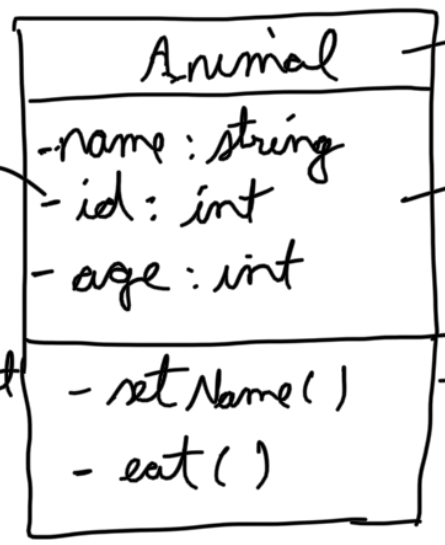
UML CLASS DIAGRAMS

Suppose, we are building a system for a ZOO.

Attributes - A significant piece of data containing values that describe each instance of that class. Also, called fields, variables, properties.

Visibility

- \- private
- \+ public
- \# protected
- ~ package (default)



Class Name

Attributes (Data)

Methods (Behavior)

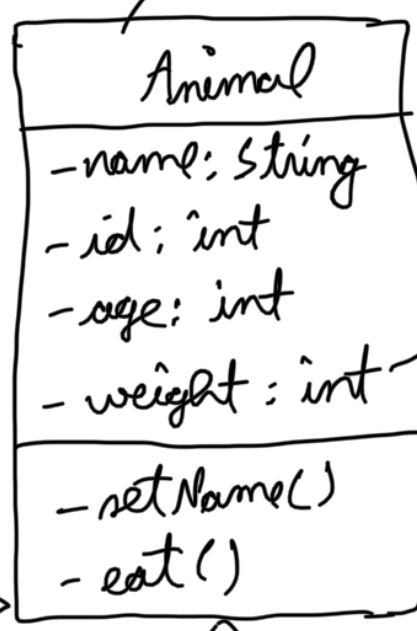
Relationships:

Inheritance

Association

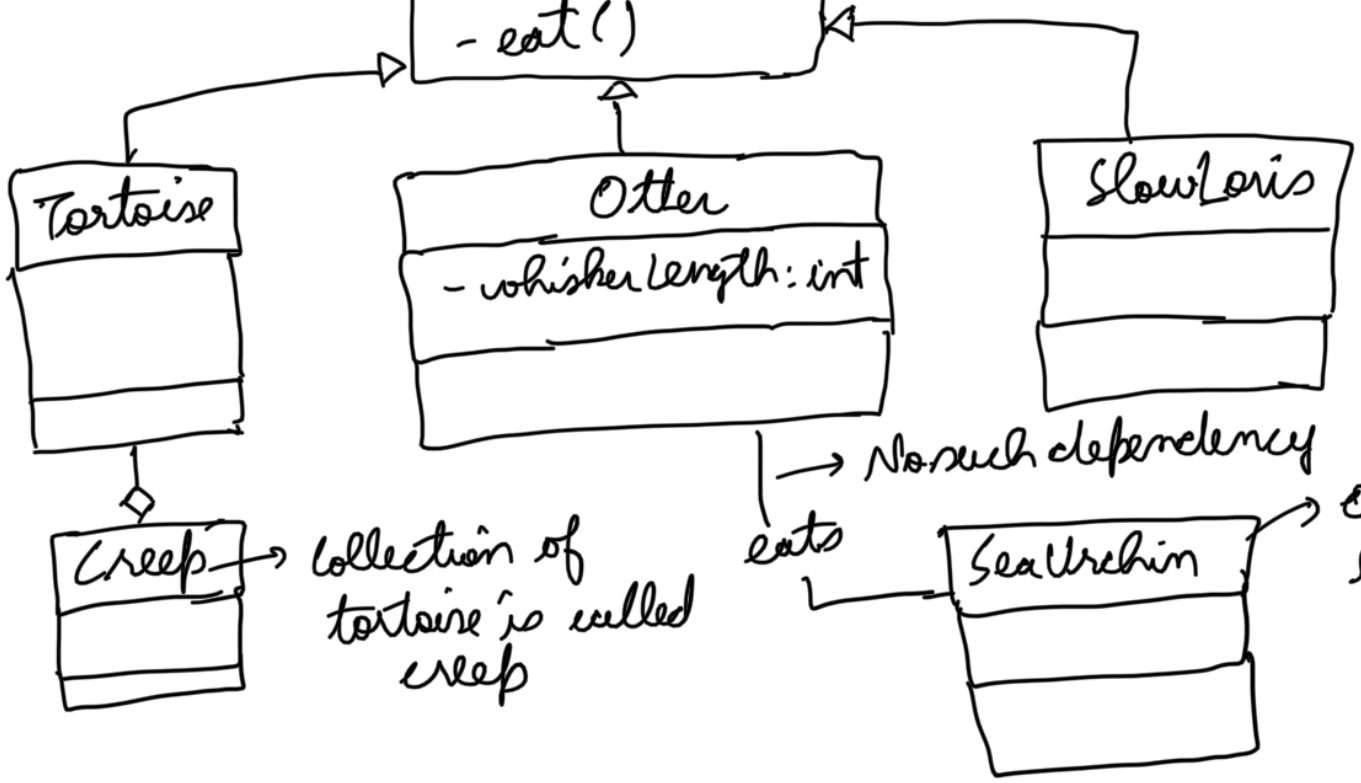
Aggregation

Composition



Here Animal is an abstraction, we don't instantiate animal class, but is there for DRY (Don't repeat yourself.)

An important feature of abstraction. Suppose I wanted to add an extra parameter to store data. I can change just the animal class and it will get reflected in all subclasses.



No such dependency

Collection of tortoise is called creep

Otter eats sea Urchin

Composition : Child object is unable to exist without its parent object.

Multiplicity.

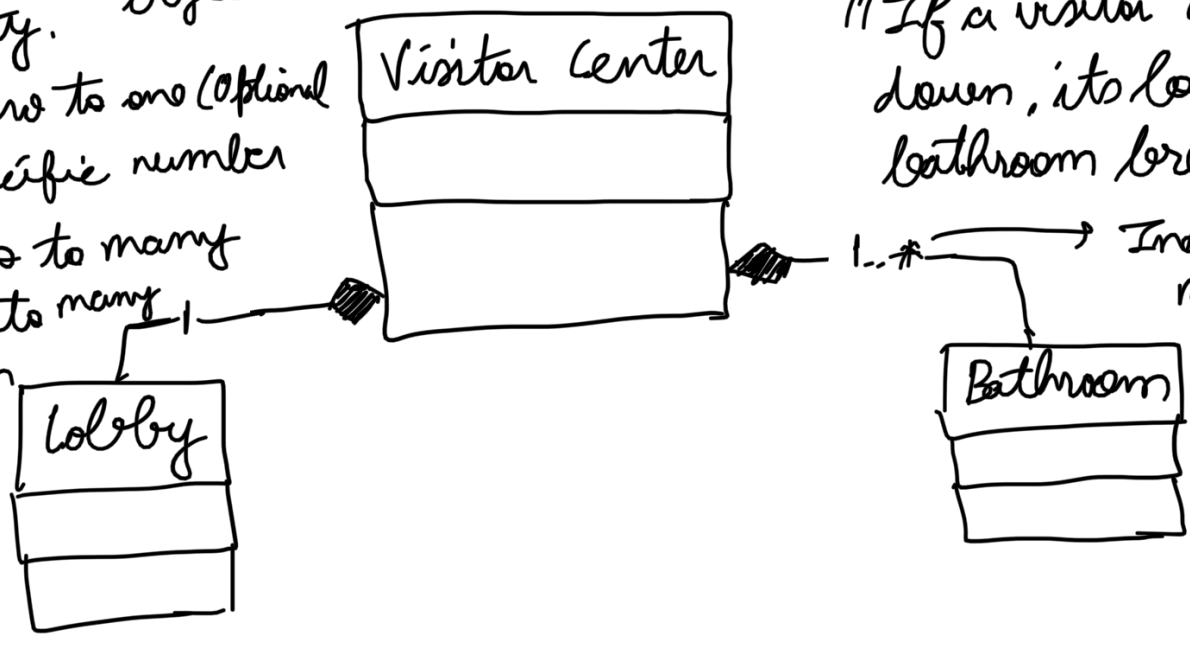
0..1 zero to one (Optional

n specific number

0..* zero to many

1..* One to many

m...n m to n



"If a visitor center is broken down, its lobby and bathroom breaks too.

1..* → Indicates 1 or more bathrooms
